Nikolas Escobal

SOFTWARE ENGINEER

Remote | niko.escobal@gmail.com | github.com/nikoescobal

SUMMARY

Full-stack software engineer with product management and startup experience. AI-first: direct coding agents through planning, implementation, review, and verification. Clojure enthusiast influenced by Rich Hickey's Simple Made Easy: separate concerns, explicit dependencies, simplicity over convenience.

EXPERIENCE

Full-Stack Software Engineer - Freelance / Contract Jun 2020 - Present

Delivered 40+ frontend, backend, and full-stack projects.

Selected engagements:

Win Labs Mar 2026 - Present

- Work directly with Win Labs' founder, a MasterClass founding engineer and former Director of Engineering, on software for a hotel operator across five Hilton-branded hotels.
- **Arrival Intelligence:** Built a full-stack GTM intelligence workflow that turns hotel records into enriched prospects for sales review. Added session recovery, enrichment controls, and delivery tracking.
- **Timesheet Management:** Built time-record processing and break-premium rules, with browser readback to verify changes, employee-level error reporting, and report review and approval.

CleverConsult.ai Jul 2026 - Present

- Work directly with the CTO on an AI platform that turns referral documents, recordings, and questionnaires into specialist clinical notes.
- Improved template previews, pipeline progress tracking, and source citations; fixed database connection and provider concurrency issues.

MoreGoodDays May - Sep 2026

- Moved reporting for five health programs from a laptop to scheduled cloud processing, with delivery checks and failure alerts.
- Integrated ClickUp, Intercom, and Aircall to synchronize client records, detect duplicates, and identify callers.
- Built and piloted a unified client dashboard for appointments, tasks, and communication history.

Helpjuice Mar - Jun 2024

Frontend Software Engineer

Built the Wizardshot React landing page; customized LiquidJS/jQuery knowledge bases and fixed bugs.

Legacy Network AG Aug 2022 - Sep 2023

Engineering, then Product Management

Built React/Next.js web and community features; moved to product management in March 2023.

Aceplace Mar 2022 - Feb 2023

Frontend, QA & Product

Built host dashboard features. Established the QA function from scratch; helped the team document and resolve 400+ bugs.

SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, HTML, CSS

Backend: Clojure/ClojureScript, Python/Django, Node.js/Bun, Ruby on Rails, PostgreSQL

Tools: Git, Playwright, Puppeteer, API integrations

Agentic engineering: Claude Code, Codex, context engineering, agent orchestration, automated verification

EDUCATION

Microverse - Full-Stack Web Development Jun 2020 - Jan 2022

Ateneo de Manila University - AB Sociology-Anthropology Mar 2011 - May 2015

TRAINING

AI Engineering Fellowship (Headstarter); Content Engineering Cohort (Advanced) (AirOps); GTM Engineering School (Cohort 3).
